

FLOSURE ATMOS
IRON/HYDROGEN SULFIDE FILTRATION

**STOP STAINS
AT THE
SOURCE**

BEAUTIFY YOUR HOME WITH FILTERED WATER

When your water is carrying iron, it may be hard to see right away but given time, it will oxidize and form rust throughout your house.

Hydrogen sulfide gas can also lead to dark stains but will also create a noticeable “rotten egg” smell throughout the home.

Avoid costly filter changes with our advanced self-cleaning system. Stop the scrubbing and start enjoying your water with the help of a reliable iron or hydrogen sulfide filter.

OPTIONAL: Bacteria Protection

PREVENTS DAMAGE

Stops chunky buildup from forming in appliances

SAVES MONEY

Buy less cleaning supplies and replacement items

TASTES BETTER

No metallic taste in food or drinks made with tap water

EASY TO USE

Automatically adjusts to fit your lifestyle

WHAT IS IN MY WATER

When well water travels through the ground, it can pick up natural materials from the environment. Iron is the most common element on Earth so it's often found dissolved in water. When iron is exposed to air, it becomes oxidized (also known as iron oxide or rust). This is what causes the brown stains in your sinks, toilets, and clothing after the water dries.

Hydrogen Sulfide (H₂S) is a gas found in the ground that is soluble in water. When you turn on the tap, the gas is exposed to air and the distinct sulfur smell is released.

Stop the smells and scrubbing with our advanced water filtration system.

MEET YOUR SYSTEM

Our advanced technology and specialized filtration media create the most efficient iron filter you will find.

• Ozone Protection

Optional add-on to dramatically reduce bacteria growth inside the filter

• 2 Sizes Available

Customized for optimal efficiency

• Ultimate Oxidization

Compressed air pocket with specialized media transforms iron and captures it

• Optional Dome Hole

Easy access to refilling media inside of tank

• Low Maintenance

Automatic regeneration based on your usage

• Made in the U.S.A.

Homegrown quality and service

See the Benefits

Iron in your water can affect your day-to-day life in a number of ways. It's not just annoying, it can lead to unnecessary costs long term.

- **More efficient water heater** and other appliances operating without the layer of crusty buildup
- **Spend less on cleaning supplies** and time trying to remove embarrassing stains and odors
- **Fabrics last longer** and you save on not needing to buy replacements
- **Buy less bottled water and other beverages** with cleaner tasting tap water
- **Get cleaner faster** with pipes, shower heads, and faucets that aren't clogged with rust deposits
- **Pasta, rice, and soups taste better** when cooked with tap water
