

**FLOSURE EQUALIZER**  
ACID NEUTRALIZER

**PERFECTLY  
BALANCED  
WATER**

## NATURALLY NEUTRALIZE YOUR ACIDIC WATER

If your water has a low pH level, it has accelerated corrosive tendencies. Acidic water will slowly eat away at your pipes, appliances, and fixtures.

Corrosion strips metals from your plumbing and leaves them behind on surfaces. When these metals oxidize, they create stubborn stains in your sinks, showers, bathtubs, and toilets.

Preserve your home by restoring the water to a balanced pH level with our reliable acid neutralizing system.

### PREVENTS DAMAGE

Reduce corrosion that leads to water leaks

### SAVES MONEY

Buy less cleaning supplies and replacement items

### TASTES BETTER

No metallic taste in food or drinks made with tap water

### EASY TO USE

Automatically adjusts to fit your lifestyle

# WHAT IS ACIDIC WATER

Pure H<sub>2</sub>O has a pH level of 7, which is absolutely neutral. The local conditions of your well may lower the pH enough to make the water more aggressive toward plumbing fixtures, and appliances.

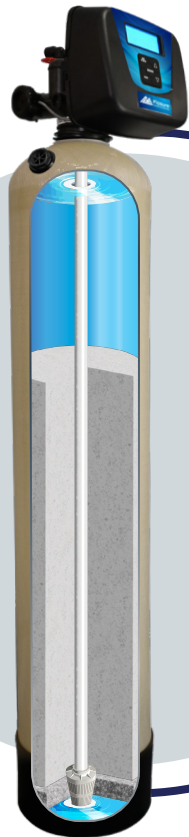

The water will leach metals that can lead to blue/green staining in homes with copper pipes, or you may notice a metallic taste when you drink tap water. Over time, so much material has been removed that it creates holes and causes leaks.

Raising the pH of the water as it enters your home is the most effective way to correct acidic water and protect your investments.

## MEET YOUR SYSTEM

Our advanced technology and specialized neutralizing minerals are the worry-free way to correct acidic water.

- **2 Sizes Available**  
Customized for optimal efficiency
- **All Natural Media**  
Soft, rock-forming minerals dissolve to safely raise pH
- **Power to Perform**  
Media blend is tailored to match the adjustment needed for your water
- **Low Maintenance**  
Easy to use tank fill port to replenish minerals
- **Safety is Standard**  
Corrosion-free materials built to last to prevent leaks
- **Made in the U.S.A.**   
Homegrown quality and service

## See the Benefits

It may be hard to tell if you have acidic water without testing, but you'll notice a big difference once it's brought back to a balanced pH.

- **Stop blue/green stains** in sinks, bathtubs, and fixtures from copper deposits
- **Appliances, faucets, and fixtures** stay intact and replaced less often when protected from corrosion
- **Reduced risk of leaks** caused by pin-hole leaks in plumbing and avoid expensive restoration costs
- **Buy less bottled water and other beverages** with tap water that tastes less metallic
- **Pasta, rice, and soups taste better** when cooked with neutralized tap water
